SVD CMS Server and client PC Pre-requisites and minimum spec

You will need:

1 PC to host the Server Software *This PC needs to be on all the time to track your SVD units.

You can view the units on the CMS software; this can be installed on your own personal PC for viewing.

Minimum spec for server:

CPU: i5-4590 @3.30GHz

Memory: 8GB RAM (We would recommend more RAM if you are planning on hosting 10 or more SVD units)

OS: Windows 10 32/64bit

Additional software: SQL 2005 OR SQL data base 2008 (free downloads)

Storage: The OS should be installed on its own Hard drive and you can add as much storage as you will want for SQL database and recordings.

Client CMS PC Spec:

CPU: i5-4590 @3.30GHz

Memory: 8GB RAM

OS: Windows 10 32/64bit

Additional software: Just the CMS software.

Storage: The OS should be installed on its own Hard drive and you can add as much storage as you will want for recordings.

There is a separate document for the install process for the server software.
