Driver Behavior Reports

Features

- Built-in Mic, G-Sensor and GPS to provide crucial evidence during incident analysis
- Live vehicle location tracking
- Vehicle trip history reports
- On-Demand live streaming video
- Audible alarm option to encourage safe driving behaviors in real-time to the driver
- SmartAnalysis software to review, backup, report, and share incident video/data

Benefits

- Potential insurance premium protection/reduction
- Video evidence to exonerate you and your driver from false claims
- Theft/crime deterrent
- Increased speed of claim resolution
- Proven reduction of incident frequency
- Proven reduction of disputed claims

SmartView helps deliver driver safety and protection information to you within seconds of an incident taking place. That may be a road collision, an unsafe speeding event or when someone wants to know you're looking out for them.

GPS vehicle position data from the a SmartWitness connected camera is sent to the portal so you can accurately track vehicles and replay the route via the simple-to-use web application.

Industry statistics show that the faster any claim can be picked up and managed by your insurer the cheaper the claim is to resolve. The lower the claim cost the less impact it has on your insurance renewal/loss ratio. SmartView combines Video with GPS tracking in one convenient application, allowing fleets to reduce and consolidate their recurring technology costs.

SmartView also is available as a white-label solution to our channel partners.
